INSECTICIDAL BAIT FOR COCKROACH CONTROL FOR DOMESTIC AND CIVIL USE - FORMULATION: GEL

Composition

100 g product content:

Acetamiprid	2 g
Appetizing and baiting substances	q.s. for 100 g

Characteristics

BLATTOXUR® GEL is a ready-to-use gel bait for the control of all cockroach species (*Blattella germanica*, *Periplaneta americana*, *Blatta orientalis*, *Supella longipalpa*, *Polyphaga aegyptiaca*). The gel is affective on cockroaches any age, whether males or females. BLATTOXUR® GEL contains Acetamiprid, the next-generation neonicotinoid active substance. The product acts by contact and ingestion and on the nervous transmission at the postsynaptic level. The formulation of BLATTOXUR® GEL contains denatonium benzoate, a bittering substance in order to minimize the risk of children's accidental ingestion. BLATTOXUR® GEL combines attractiveness, palatability, and insecticidal effectiveness.

Attractiveness: the food substances and additives contained in the product attract the insects up to the distance of one metre.

Palatability: the food substances contained in the product stimulate the cockroaches' feeding process. This ensures the intake of lethal doses of active substance.

Effectiveness: Field-testing have resulted in the elimination of the entire cockroach population 5 or 6 days after the application.

BLATTOXUR® GEL is stable and effective for many weeks after the application. The product does not ooze, seep, stain, or get dry.

Use

Apply product droplets, the size of a lentil, on fissure, wall cracks, baseboards, electric boxes, water pipings, and on all dark, damp and warm spots where environmental conditions favour the cockroach proliferation. For prevention purposes or for the control of *Blattella germanica* only use at the following doses:

- kitchens or places where food is prepared: 2/3 drops per sqm
- bathrooms or any other damp and warm places: 2/3 drops per sqm
- other places: 1/2 drops per 10-15 m²

For curative purposes or for the control of *Blattella orientalis* to use at the following doses:

- kitchens or places where food is prepared: 4/6 drops per sqm
- bathrooms or any other damp and warm places: 2/4 drops per sqm
- other places: 2/4 drops per 10-15 m²

It is recommended not to use the product on frequently cleaned surfaces.
